

## ***AutoSort Color Detector***

Model: CD-1

### **Detect and sort specially marked hogs**

The AutoSort Color Detector allows you to detect painted animals and sort them according to special settings. The advanced-technology sensor mounts in the AutoSort sorter and connects quickly and easily to any new or existing auto sort touch or AutoSort Connect scale head.

Common uses for the CD-1 include gilt selection and sick pig segregation. For example, you can select and mark gilts for breeding. When one of the specially marked gilts moves through the sorter, the CD-1 detects the painted animal and the system sorts it according to the color sorting settings. This allows you not only to separate the gilts, but also to confirm that they are the correct weight.

### **Features**

- Quick and easy installation in new or existing AutoSort scales
- Easy configuration using Phason's Select Sort software
- Rugged enclosure (corrosion resistant, water resistant, and fire retardant)
- Limited warranty (90 days)

### **Additional information**
