USB RS485 Converter (RS485-FD)

Optically-isolated, self-powered USB to RS485 converter

Phason's USB RS485 Converter (model RS485-FD) allows you to convert any USB port on your laptop or desktop computer to an RS485 communication port. The RS485 Converter provides full-duplex, four-wire RS485 serial communication.

All Phason networkable devices (for example, a ventilation control) communicate with the computer using four-wire RS485 serial communication. Using the RS485-FD and appropriate Phason software, you can set up a central monitoring and control system for your site.
